

Guillermo Rentería Hernández

Software Developer · Backend

Torreón, Coahuila, Mexico · renteriah.github.io · github.com/RenteriaH · linkedin.com/in/guillermo-renteria-9263052a6

SUMMARY

Backend-focused software developer: REST and GraphQL API integration on a production Shopify Plus store, plus my own services in Python, Node.js and PHP with automated tests and Linux deployment. I use AI agents while reviewing and verifying every change.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, PHP, SQL

Backend & APIs: REST, GraphQL, WebSockets, FastAPI, Node.js, OAuth

Data: MySQL, PostgreSQL, SQLite, DuckDB, Parquet, JSON/CSV

Testing: pytest, mypy, ruff, Playwright, Vitest

Tools: Git, GitHub Actions, Linux, systemd, Docker

EXPERIENCE

Software Developer Intern (Professional Residency) — MAHA Home de México

Jul 2026 – Present

Torreón, Mexico · On-site

- Integrate and consume Shopify REST and GraphQL APIs, including bulk operations.
- Organize and model product data with metafields and metaobjects.
- Automate visual tests with Node.js and Playwright, improve Core Web Vitals and document each change.
- Build responsive components and features for product and cart pages on a production Shopify Plus store using Liquid, HTML, CSS and JavaScript.

PROJECTS

QCE — Real-time market data engine · private repository

Python, FastAPI, WebSockets, DuckDB, Parquet, React, pytest, mypy

- Defined the architecture and risk rules of a system that ingests REST and WebSocket data, stores it in Parquet and DuckDB, and requires human approval.
- Directed and reviewed code written mostly by AI agents; about 4,000 Python and 82 React tests, plus mypy and ruff.

EcomOS — E-commerce operations platform · private repository

Python, FastAPI, Node.js, GraphQL, PostgreSQL, Docker, systemd, pytest

- Designed integrations with Shopify (GraphQL), Meta and a dropshipping supplier API behind write gates: dry run, approval, backup and readback.
- Deployed services to a Linux VPS with systemd, Docker and reversible releases; code written by AI agents under my review, with about 3,900 tests.

GYMWARRIOR — Academic web store (2024), hardened in 2026

case study

PHP, MySQL, JavaScript, Bootstrap, Playwright

- Fixed ten security issues with AI assistance: SQL injection (prepared statements), CSRF, unvalidated uploads and non-transactional checkout.
- Validated the fix with 13 Playwright end-to-end tests: 10 fail on the original and all 13 pass after hardening.

EDUCATION

B.Eng. in Computer Systems Engineering — Instituto Tecnológico de La Laguna

2022 – Present

Technical High School Diploma in Electronics — CECyTEC

2021
